

NASA Space Flight Center

On June 21, 1967, [REDACTED]

STAT

STAT

[REDACTED] at the NASA Man Space Flight Center.

STAT

[REDACTED] was attempting to set up an optics research laboratory and was engaged in a theoretical and experimental study of Fresnel lenses. He had made a few preliminary calculations of the prism angles and expected energy concentration. He did not appear to be aware of the extensive literature in this field. Either he had no startling ideas or he did not care to divulge any. We really saw nothing of promise in his research. He had a great deal of fine equipment available. A large vacuum spectrograph, excellent on line computing facilities etc., but the laboratory was not really in operation.

STAT

[REDACTED] seemed to be a bright and capable scientist and he may get into some worthwhile projects in the future, but at the moment he was fairly well immobilized because of the lack of higher-up direction of program.

Summary

During this period I spent most of my time consulting with the agency and I made two trip reports.

This report includes copies of a thesis written by

This thesis was the result of work

previously supported on this contract.
